WILD ROVERS OF THE SKY.

ALL ABOUT COMETS AND THEIR

l attraction upon the waters of our OMETARY COLLISIONS PAST AND COMING. obe as to pull up a tidal wave "two evel, and thus inundate all the continents the world." In this calculation it was The 12th of August has come and go: apposed that the comet might remain g enough over one region of the earth overcome the inerta of the waters, vely advertised to arrive on that day, alculation which another calculator, Du ejour showed to be almost impossible. with which the prophecies As we are dealing rather with what is urious than what is important, we redid much to gain the credence of mark by the way that Lalande's memoir embodying his calculations created a people, and now that they are proven have erred in their calculations is likely rrore in France in 1773, the year of it create a reaction that will greatly weakproduction. It was to have been read to the popular faith in astronomical pre-Academy of Sciences. It was no Among a large class, however, ead, but its purport was bruited the next e interest which was aroused by general sension of Plantamour's policy, will lay, and of course understood. Lalande was declared to have announced a comet ove very beneficial. A general curiosi-has been induced to learn exactly how hat was to destroy the world in a year, nonth, aye, in a week. Such a pani science will enable us to forecast the was raised that the police authorities had ovements of these erratic wanderers in demand of the astronomer a prompt and reassuring explanation. This was a once given and published in the Gazette le France; but it was of small avail. He vas inumetated with letters and anxious an's Magazine discusses at length the quiries, and he determined upon giving sibility of a cometary collision and the uli publicity to his calculations. Whether ossible effect on our globe, in the event these sufficed to allay the public fears the of such a meeting. In regard to the report first stated by Plantamour that a omet would strike the earth August 12. CONSEQUENCES OF A COLLASION. e says a reasonable explanation for the ror made can be found in the fact that e meteor stream which the earth enintered about that day mislead him-deors are in some manner allied to com-

From the foregoing statements it will have been gleaned that a surpassingly high tide is one of the conceivable consenences, not of an actual collision with perhaps very intimately, masmuch as tain meter streams have been discovred to occupy and course around the orits of certain comets, and it has even en surmised that what is solid in a comet of us in the year 1862, has its path strew-d with meteoric particles, as with debris hat it has left behind it. The earth inrth would be elevated 13,000 feet, over opping every European mountain exception of Blane, and leaving only the inhab tersects this path every 11th of August, and some of these particles then plunge tants of the Andes and the Himalayas to people the globe. This seems very ter happily the fearful result is derived om data containing one unjustifiable motion, that which we have italicized i e tail, for comets do not trail their tai rass we do not mean bulk, but weight of t the report to which we have affuded aw out of some simple announcemen this circumstance. It may be suspect-that since each year we cross the com-capath we may one day fall foul of the only itself; so we may, but it will not be We are not aware that any actual deter-mination of this datum has ever been

chich twice went right into Jupiter's sycars, it will not come near us again to be year 1975, and the odds against the one, though they range from 2,000 t ses: that is to say, they are very ligh he weight of the earth, while the ligh but a two-hundredth. without the fiery visitor from the vasty epths of space, which had been so exten arting in an appearance. this visit had been made by the learned the heavens. To meet this general desire for information on a subject, interesting at any time, and especially so just now, writer in a recent number of the Gentle-

AS PLENTY AS FISH IN THE SEA We have, therefore, little to fear from hat comet, though we do not actually run cross the path it traverses. But Kepler de he sea is of fishes; and, considering the infinity of space, his metaphor may not be so far overdrawn as, apart from this consideration, we might be disposed to regard it. Arago, indeed, indorses the Keplerian assertion so far a to estimate that the number of cometary bodies which n their orbital journeys pass through the olar system amounts to seventeen mit ons. Clearly this plentitude must induce

ome risk of an earth-and-comet collision or we know of no provision of nature for ve may suppose provisions to exist for hould occur. But the chances of occur ence are feeble indeed. The illustrion reach astronomer whose name we have ust mentioned, calculated the probabilin size, and supposed to approach the sun hat the odds against the meeting were r supposed solid part; the nulous sur rounding which commonly streams off to form the customary tail might have a ngly increased. But we may dismiss a nce any apprehension of danger from

wish of a comet's caudal appendage, for y received this, the latest instance having tragged his tail over us on Sunday, June thirds the tait's length from the nucleus. This fact was first deduced by calculaon, and it has received curious confirmnon from observations that have gently come to hand; for an Australian orresponding to our afternoon (when it as night with him), saw the branches or ide houndaries of the tail widen out: and the same evening, a few hours later

server, viewing the comet at a time wo English observers saw the closing up the narrowing of the tail hese effects being those which considerain approach to us and a recedence from whole earth actually passed through, and bout sunset on the day in question.
